

# Debugging tests

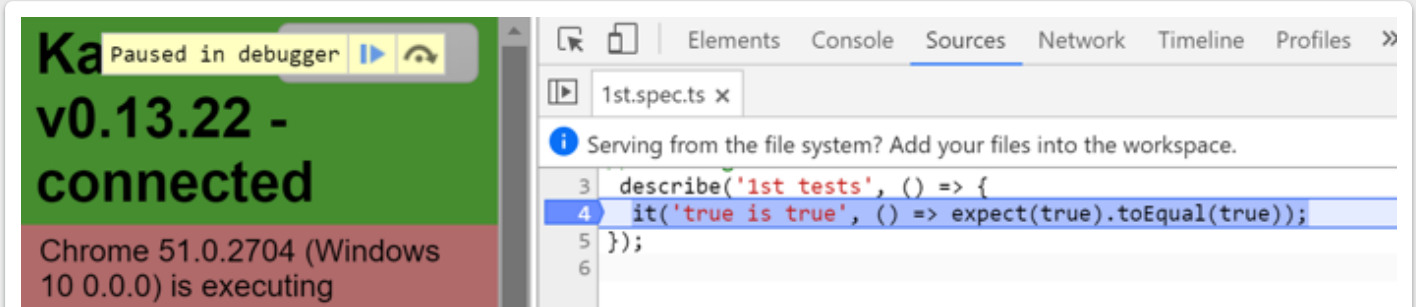

If your tests aren't working as you expect them to, you can inspect and debug them in the browser.

For the sample app that the testing guides describe, see the [sample app](#).

For the tests features in the testing guides, see [tests](#).

Debug specs in the browser in the same way that you debug an application.

1. Reveal the Karma browser window. See [Set up testing](#) if you need help with this step.
2. Click the **DEBUG** button; it opens a new browser tab and re-runs the tests.
3. Open the browser's "Developer Tools" (Ctrl-Shift-I on Windows; Command-Option-I in macOS).
4. Pick the "sources" section.
5. Open the `1st.spec.ts` test file (Control/Command-P, then start typing the name of the file).
6. Set a breakpoint in the test.
7. Refresh the browser, and it stops at the breakpoint.
